

MLS-Touch

In this release of [MLS-Touch 3.5](#) members will be introduced to a few new enhancements that will give members more options while adjusting to the new restrictions being put in place. One of the key features of this release will now allow us to support *Virtual Open houses*.

Send multiple listings at once by SMS

Members are now able to send multiple listing by SMS (Text) the same way they can when sending by email.

From the List View, select the Action Menu at the top right, then select *Send by SMS*. Tap the listings to share, then select the client from the list of Contacts.

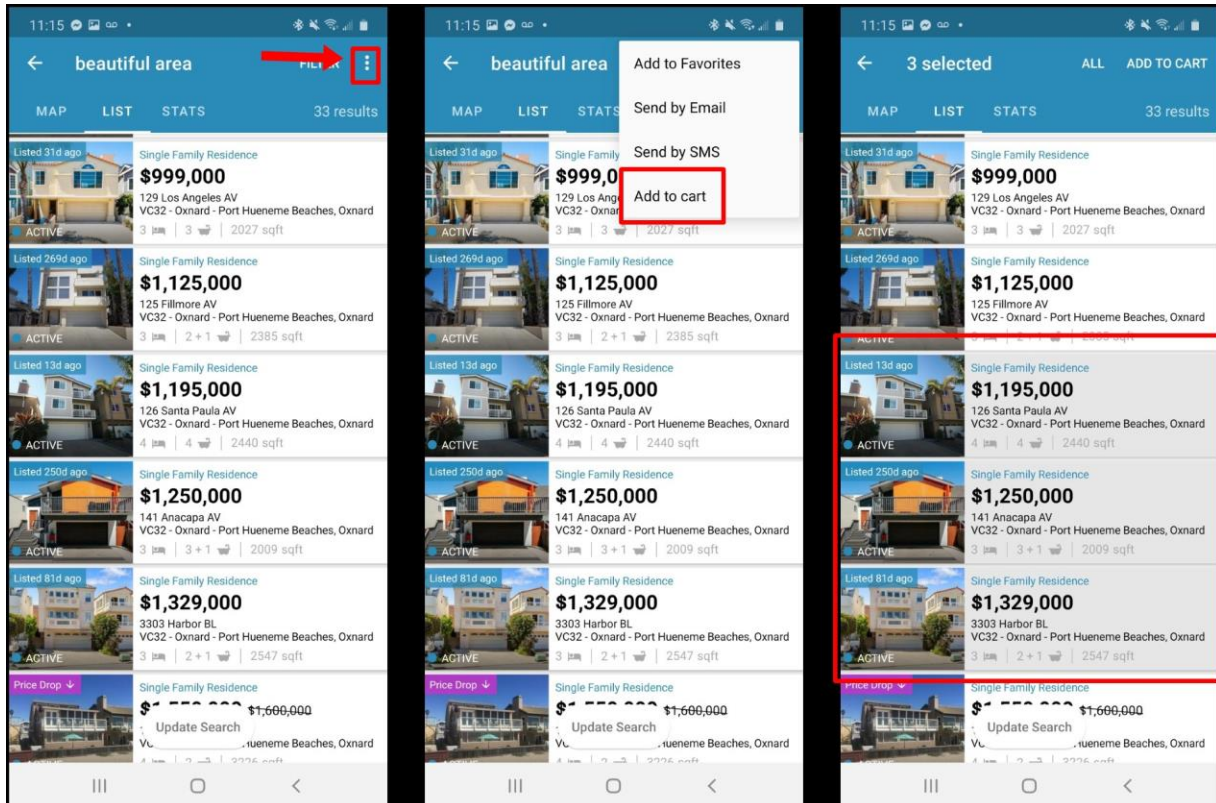

Please note: In order to send a listing(s) by SMS, a phone number must be available in the Mobile Phone field in the client contact record.

Add multiple listings at once to a Cart

In the previous version of MLS-Touch, members were only able to add one listing at a time to a client cart. It is now easier than ever to stay organized in MLS-touch.

From the List View, select the Action Menu at the top right, then select *Add to Cart*. From here you can choose which listings to add.

Added support for virtual open houses

In order to support changing policies on open houses, MLS-Touch now offers support for virtual open houses. This means that if the URL is provided for us in the RETS feed, we will now be able to setup and display the new open house type in the app.

Minor Changes

- Minor changes to the "sold on" and "listed since" labels in lists and the listing view
- Minor changes to the "Payment every XXXX" text in the calculator
- Minor changes to the rental text in lists and the listing view to say "leased" instead of "sold"
- Auto fit numbers in the listing view information bar
- More than 20 other optimizations and bug fixes

IOS Updates

- Optimized the schools feature to return more precise results (iOS only)
- Redesigned the status bar below the header bar: taller and now white (iOS only)
- Increased safe zone around the favorite star in the listing view (iOS only)
- Removed black multitask bar at the bottom in the listing view (iOS only)
- Minor UI refinements in the filter popup (iOS only)
- Minor UI refinements on the tabbar (iOS only)
- Improved resolution of icons in most places (iOS only)
- Added support of iOS13 Look Around where available, not in Canada for now (iOS only)
- Firebase Events cleanup and added stats about webservice calls + timeouts

Android Updates

- Optimize application for Android 10 (Android only)
- Refactored the Google license keys management (Android only)
- Added latest Radius SDK bundled with FB SDK 4.0
